

Dear

I am looking forward to welcoming you to and hope you have a successful time deer stalking/hill walking with us.

You are probably aware that **Chronic Wasting Disease** (CWD) is present in deer in North America and Scandinavia and it is essential that adequate bio-security precautions are taken to prevent the introduction of this disease into the UK as it could have disastrous consequences for the UK deer population.

This link <https://www.bds.org.uk/index.php/documents/research/101-chronic-wasting-disease-leaflet/file> is to a leaflet explaining the disease and advising the measures that should be taken to prevent the introduction of **Chronic Wasting Disease** into the UK.

Please do confirm to me that you have read the leaflet and ensure that both you and anyone accompanying you follow the guidance for bio-security precautions as set out. Our policy is to have a guest's kit inspection before setting out to the hill.

Thank you for your observance of these important precautions and hoping you have an enjoyable and successful time with us.

Yours
